

Bugs to fix

1- Aggressive random scrolling

| When I select a new font color or a highlight, my app randomly pushed me down away from selected text. though it does highlight and color it ! this doesn't only apply on colors but also any tool from the toolkit , like A a , depending on where I am on the page , if i am on top of it, works normally, but as soon i am typing at the bottom , it breaks and loses its spacing calculation, resulting in random yet aggressive scrolling which drags me away from where I want to color/write/increase size etc

|

■ fixed

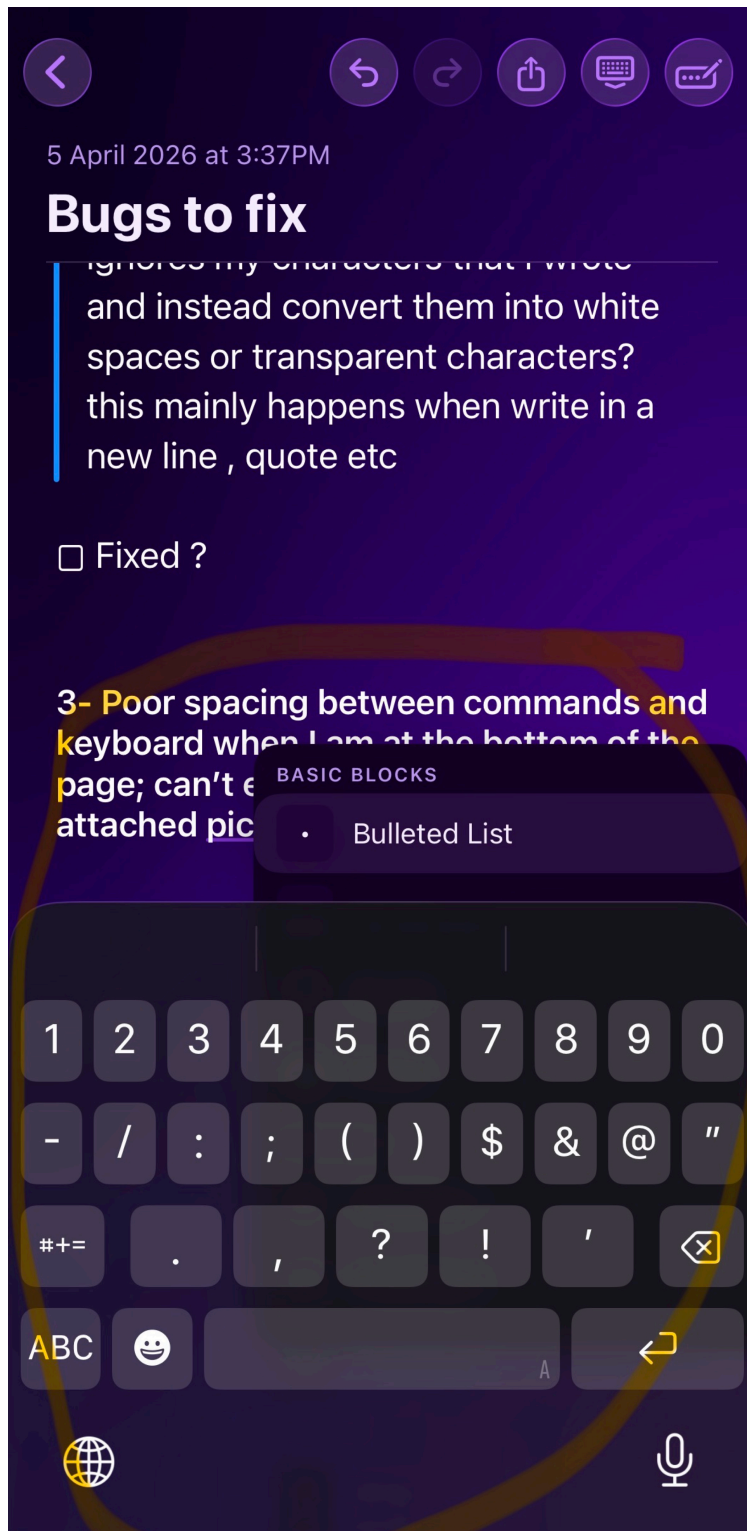

2- Random White "transparent " white spaces

| When I get started to write a quote , or let's say a new page , when I am at the first few lines , it somehow ignores my characters that I wrote and instead convert them into white spaces or transparent characters? this mainly happens when write in a new line , quote etc

■ Fixed ?

3- Poor spacing between commands and keyboard when I am at the bottom of the page; can't explain as much but

check attached picture. The more I am the bottom of the page , the more command menu becomes harder to use, poor auto like scrolling or space calculations?

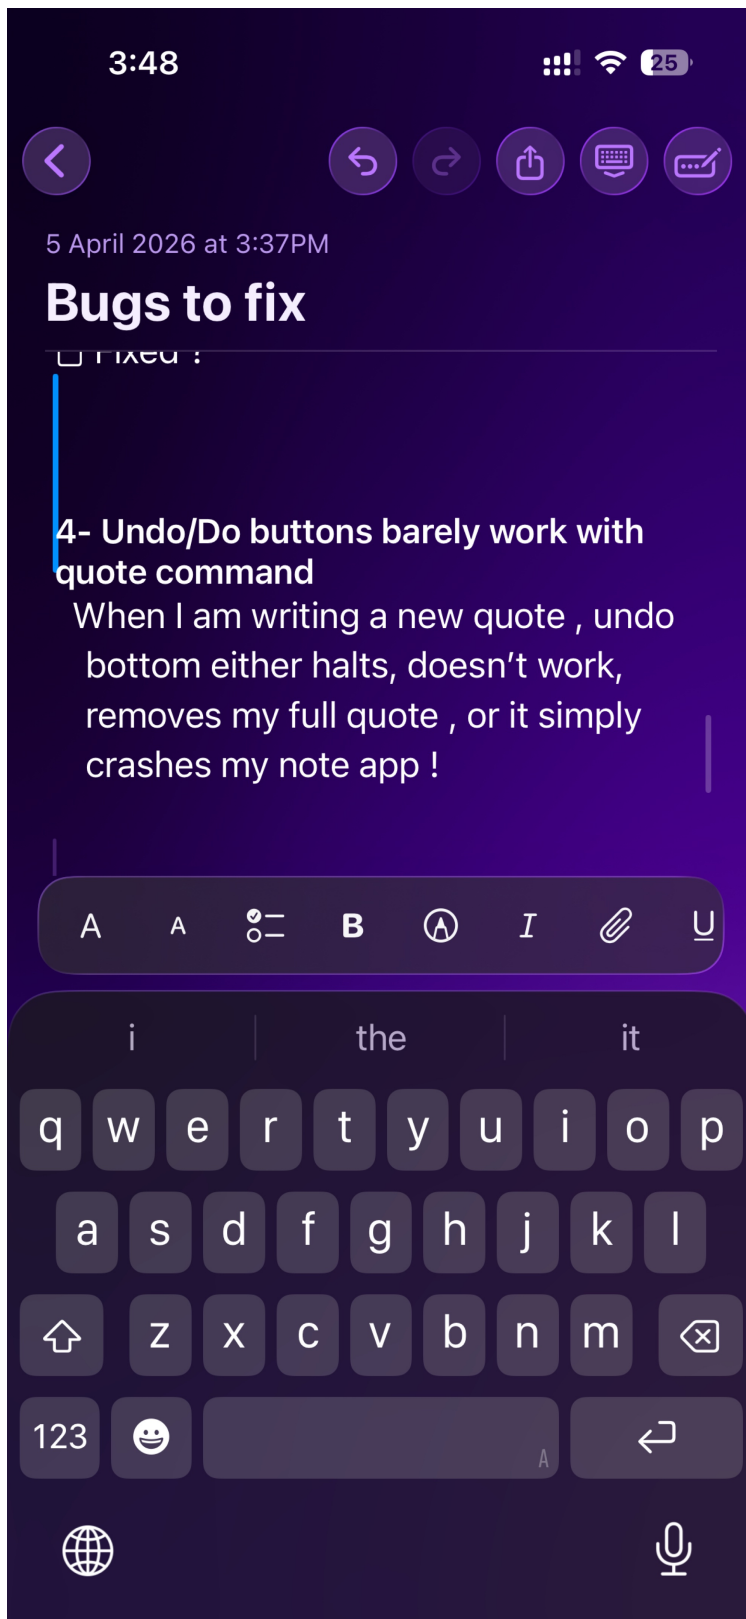

■ Fixed ?

4- Undo/Do buttons barely work with quote command

| When I am writing a new quote , undo bottom either halts, doesn't work, removes my full quote , or it simply crashes my note app !

5- Random positioning of Quotes and overall poor performance when I am the bottom of the page or after attaching picture , check attached pic below and analyze it.

■ fixed ?

6- Photo Feature bugs:

■ Initial size of attached pictures is way too big: try to make attached pictures smaller overall , they get way too big after attaching, and I have to minimize them using -+. you need to find the ideal length and height for them relative to my task detail page overall size

■ after minimizing an image myself , cursor gets also minimized with it ! resulting in smaller font size automatically!

■ Minimized/ maximized pictures lose their size when I go back to main tasks page (no auto saving to their sizes, poor console logs) like If the picture 1 size is set to 40% , when i go back to main tasks and back to it, it becomes 100%.

7- Toolkit bugs

■ B from toolkit does its job but sometimes it also makes font bigger than what B does ? quadre it

■ A and small a buttons work, but they also randomly apply B while increasing or decreasing the font , which is wrong , I am sure there are other bugs in toolkit too. investigate.

8 UI bugs:

| ■ Quote itself doesn't get intended properly, it currently almost match my text padding , which is wrong

■ upon exporting files as pdf, quotes loses its padding, and overall | bar size, the bar size is correct on my app, but poor when exported it simply gets shrunk

■ Checkboxes or todo list become poor design upon exporting , they become fully black (black boxes)

■ Export as PDF has random page length calculation: like what I write here doesn't see to be well written and

positioning on the pdf pages; sometimes it writes two lines in an entries page; sometimes it works and writes full pages.

9- Random event + calander notification creation:

■ I was writing my tasks and accidentally wrote task 8-9 which means task 8 and 9, my app somehow created an event , auto deleted it , and crossed it out thinking of it as a maybe a 9 p m task ? not sure what happened but this should never be the case ever again.

10- Share button

■ should always shares the files as PDF , not txt file ! fix that, maybe there is no need for this option that shares as a PDF anymore since normal sharing will do that natively.

11-Overall Responsiveness

■ try to make my overall app as responsive as it gets

12- Study my task detail page to find more errors yourself.
